1. This memo is to confirm our request of Monday for photography, at altitude, with the A-2 24" main configuration, of a portion of the Phoenix, Arizona photogrammetric range. I believe that [REDACTED] gave you a map of the area with the preferred flight line. We would like this mission performed with a set of calibrated cameras, or at least with cameras and lens numbers so that they can be calibrated.

2. [REDACTED] were here at PIC the other day to look over some material from a quality evaluation viewpoint. They mentioned that we would be better qualified to write our film evaluations if we had a copy of their TWX evaluation report made in the field. Can this be arranged?

3. [REDACTED] suggested also that he felt quite guilty about the fact that we keep two men busy almost full time in preparing the film evaluation requests, which are for the primary benefit of Hycon and P and E. Of course, we realize the long term benefits at PIC through product improvement based on the critical quality analysis made here. But anyway, Wil suggested that we consider the idea of having a Hycon man here to work with and help our people on the evaluation operation. I couldn't give him an answer as he works on contract with you. I felt I should bring this to your attention in case he didn't mention it to you. I have no firm opinion at this time as to whether this would be a completely desirable arrangement.
